NORTHFORGE
MATERIALS AND
COMPOSITES

MATERIALS ENGINEERING

Composite Firearm Components

NorthForge develops composite material options for OEM component programs, with a focus on lower weight, impact resistance and heat dissipation.

Stocks

NorthForge composite stocks are designed to weigh less and better withstand impacts.

Lower weight and higher impact resistance

Handguards

NorthForge composite handguards are designed to cut weight, withstand severe impacts and dissipate heat.

Lower weight, impact resistance and heat dissipation

Grips

NorthForge composite grips are designed for zero water absorption, heat dissipation and resistance to damage from drops.

Zero water absorption, heat dissipation and drop resistance

Frames

NorthForge composite frames are designed to be lighter and more impact-resistant than injection-molded glass-filled polymer frames.

Lower weight and higher impact resistance
